3M Purification continues an 95+ year tradition of innovative cost effective solutions to challenging industrial filtration applications with Betapure BK-Z8, formerly known as Beta-Klean Z8. Betapure BK-Z8 is a truly absolute rated, rigid (non-compressible) resin bonded filter cartridge. Consistent quality and performance at absolute ratings from 5 to 70 μ m make Betapure BK-Z8 the clear choice in the confusing world of indistinguishable "me-too" cartridge filters.

Consistent Performance

Absolute rated rigid structure Betapure BK-Z8 provides consistent performance. Unlike many competitors, Betapure BK-Z8 does not unload or lose filtration efficiency throughout its usable life.

Significant Life Advantage

Betapure BK-Z8's rigid graded density grooved structure provides a significant life advantage over the competition.

3M Purification provides quality solutions worldwide for the most challenging filtration applications. 3M Purification filtration systems include clarifying filters, pre-filters, final filters, stainless steel housings and engineered skid-mounted systems designed and sized for specific applications.

What is Betapure BK-Z8 ?

Betapure BK-Z8 is a rigid, graded-density filter cartridge constructed primarily of acrylic fibres, cellulose fibres and a tough chemically resistant thermosetting resin. The manufacturing process results in more fibres towards the centre core region creating a graded-density structure. The thermosetting resin "bonds" the fibres into a permanent rigid matrix. Betapure BK-Z8 cartridges are grooved to significantly increase the surface area and extend the service life. Betapure BK-Z8 is manufactured and tested to deliver quality, consistency and absolute cost effective filtration performance. 3M Purification's in-process quality assurance provides the control that results in consistent cartridges with defined absolute ratings time-after-time.

Consistent Performance

The initial Beta Ratio for all grades of Betapure BK-Z8 filter cartridges is equal to or greater than 1000 and each cartridge performs at or above this initial value throughout its usable (all the way to plugging) life. This defines Betapure BK-Z8's absolute filtration performance. The Beta Ratio vs. Differential Pressure Graphs 1 and 2 illustrate how competitive filters do not achieve the consistent performance of Betapure BK-Z8. Filters that show a decrease in Beta Ratio as the differential pressure increases are exhibiting either unloading of previously held contaminants or a loss of filtration efficiency. This inconsistent performance results in a reduction in finished product quality, product yield and an increase in total filtration cost.

Comments

- As illustrated in Graphs 1 and 2, the performance of melt-blown polypropylene (Competitor A) degrades rapidly after a small (35 mbar) increase in differential pressure, indicating contaminant unloading and a loss of filtration efficiency typical of a compressible structure. In Graph 1, the generic cotton wound, Competitor C, exhibits erratic performance caused by media movement under increasing pressure and, in Graph 2, it exhibits minimal ability to retain contaminant throughout the test.
- In Graph 1, melt-blown Competitor B never approaches a Beta Ratio of 1000 and it shows a decreasing Beta Ratio at high differential pressure.
- Resin bonded Competitor D, as shown in Graph 2, exhibits very low Beta Ratios at low differential pressures indicating poor performance. Above 70 mbar, the contaminant builds a cake which accounts for the subsequent increase in Beta Ratio.

Betapure BK-Z8 exhibits consistent Beta Ratios at all differential pressures.

Absolute Betapure BK-Z8

Absolute Betapure BK-Z8 removal ratings are determined for the entire cartridge life using a new filter performance test developed by 3M Purification that complies with the general procedure outlined in ASTM 975. Test conditions available on request.

3M Purification defines Absolute Rating as ,,the particle size (x) providing an initial Beta Ratio (β x) = 1000". At this Beta Ratio the removal efficiency is equal to 99.9%. Beta Ratio (β x) is defined by the following equation:

Betapure BK-Z8 filters achieve a minimum Beta Ratio (ßx) value of 1000 at the specified ratings seen in Table 1.

High Temperature Betapure BK-Z8

Standard Betapure BK-Z8 provides consistent performance at temperatures to 120 °C and differential pressures to 4.8 bar.

High temperature (HT) Betapure BK-Z8 extends the temperature rating to 149 °C for those processes that require service under extreme conditions.

NOT RECOMMENDED FOR HOT DI WATER. This HT version requires NYLON flat gasket (DOE) or polyester end cap. (SOE). Please see ordering guide.

Reproducible cost effective filtration

Betapure BK-Z8 is manufactured to rigid specifications and subjected to stringent process and quality controls to ensure consistency in filtration performance and ultimately, end-user process consistency - run after manufacturing run.

Rigid graded density Betapure BK-Z8

Betapure BK-Z8 filter cartridges are manufactured using an exclusive process that achieves a true "graded density" fibre structure with a clean and smooth inside diameter. Each fibre is locked in this arrangement by a thermosetting resin binder to create a rigid structure, eliminating the need for a metal or plastic centre core. Larger particles are trapped in the outer area and finer particles towards the inner area.

Figure 1 illustrates how in a graded-density structure the overall effect is to clarify and retain particles by size as they progress through the cartridge.

Betapure BK-Z8: High surface area

Betapure BK-Z8 cartridges also feature an optimised groove pattern that increases the surface area by over 65% when compared to smooth cylindrical cartridges (see Figure 2). The grooved surface prevents premature blinding of the outer surface by large particles and allows full utilisation of the depth structure. Maximum surface area with a true graded-density structure means that Betapure BK-Z8 can provide 3 times or greater service life than competitive filter cartridges.

Betapure BK-Z8 flow rates

Table 3 provides flow information for Betapure BK-Z8 in aqueous fluids.

For liquids other than water, multiply the specific pressure drop value (in column 3) by the viscosity in centipoise. The specific pressure drop values may be effectively used when three of the four variables (Viscosity, Flow, Differential Pressure and Cartridge Grade) are set.

Waste Management

Betapure BK-Z8 cartridges contain no metal or plastic cores. They can be incinerated, shredded, or crushed after use to reduce overall disposal costs.

* Specific aqueous pressure drop at ambient temperature for a single equivalent 10" cartridge. For multiple cartridge lengths, divide total flow by the number of single length equivalents.

** Optimal efficiency and life is achieved at aqueous flow rates less than the maximum flow indicated.
