Typical Properties and Applications

DOWEX™ MARATHON™ C strong acid cation exchange resin is a uniform particle size resin designed for industrial and residential softening and demineralization applications. The small uniform beads exhibit faster kinetics than conventionally sized resins. The improved kinetics results in improved regeneration efficiency, higher operating capacity, reduced regenerant usage and less waste water.

DOWEX MARATHON C resin also shows outstanding stability to compressive and osmotic stress.

For other temperatures use:

$F_T = F_{77°F} [1+ 0.008 (T_{°F} -77)]$, where $F \equiv gpm/ft^2$

$F_T = F_{25°C} [1+ 0.008 (1.8T_{°C} - 45)]$, where $F \equiv m/h$

Pressure Drop (bar/m, psi/ft) vs Linear Flow Rate (gpm/ft2, m/h)

For other temperatures use:

$P_T = P_{20°C} / (0.026 T_{°C} + 0.48)$, where $P \equiv bar/m$

$P_T = P_{68°F} / (0.014 T_{°F} + 0.05)$, where $P \equiv psi/ft$

Note: These resins may be subject to drinking water application restrictions in some countries: please check the application status before use and sale.

Warning: Oxidizing agents such as nitric acid attack organic ion exchange resins under certain conditions. This could lead to anything from slight resin degradation to a violent exothermic reaction (explosion). Before using strong oxidizing agents, consult sources knowledgeable in handling such materials.
