Typical properties and applications

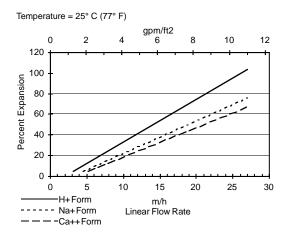

DOWEX™ MONOSPHERE™ 750C (H) cation exchange resin is a condensate polishing grade resin with high total exchange capacity, uniform particle size, exceptional bead integrity and a distinguishable dark color. It is ideally suited to the high flow rate demands of condensate polishing applications.

The combination of uniform particle size and a 765-micron average bead diameter makes this resin an excellent choice for use with the DOWEX MONOSPHERE 700A (OH) anion resin. The uniform particle size will enable excellent separation to reduce contaminant ion leakage, while the larger bead diameters will minimize pressure drop across the mixed bed resin. This is especially important in high velocity condensate polishing conditions of systems with a Tripol-design.

For other temperatures use:

 $F_T = F_{77^{\circ}F} [1 + 0.008 (T_{\circ}F - 77)], \text{ where } F = gpm/ft^2$ $F_T = F_{25^{\circ}C} [1 + 0.008 (1.8T_{\circ}C - 45)], \text{ where } F = m/h$

Figure 2. Pressure Drop Data

For other temperatures use:

 $P_T = P_{20^{\circ}C} / (0.026 \, T_{^{\circ}C} + 0.48)$, where P = bar/m $P_T = P_{68^{\circ}F} / (0.014 \, T_{^{\circ}F} + 0.05)$, where P = psi/ft

Warning: Oxidizing agents such as nitric acid attack organic ion exchange resins under certain conditions. This could lead to anything from slight resin degradation to a violent exothermic reaction (explosion). Before using strong oxidizing agents, consult sources knowledgeable in handling such materials.
