## Industrial Ultrafiltration Elements – PVDF 20,000 MWCO

The JW-Series family of ultrafiltration membrane elements is used for process stream purification including clarification and removal of large organic molecules.

The JW-Series membrane is characterized by an approximate molecular weight cut-off of 20K-50K daltons.

<sup>1</sup>These elements are bagged dry before shipping.

<sup>2</sup>Internal diameter unless specified OD (outside diameter).

<sup>3</sup>The element diameter (dimension C) is designed for optimum performance in GE pressure vessels. Other pressure vessel dimension and tolerance may result in excessive bypass and loss of capacity.
