- [1] Module with Connecting Kit (end caps and couplings). Please contact inge GmbH if you want to order replacement modules without Connecting Kit. Modules are delivered with end caps ports aligned with the filtrate / backwash port with a tolerance of ± 3 mm. In the event that the alignment needs to be modified, the end cap couplings can be loosened to align the end caps ports with the filtrate / backwash port as desired. After alignment, the end cap couplings must be fastened with a torque wrench whose tightening value must be set at 40 Nm.
- [2] Please refer to the latest version of the Multibore® datasheet.
- [3] For membrane related operating conditions, please refer to [2].
- [4] The design pressure corresponds to the maximum permitted operating pressure in continuous operation at the specified design temperature. Higher operating pressures than 5 bar may be possible in certain cases. However, this must first be verified and approved by inge GmbH.
