POLYPROPYLENE STRING-WOUND CARTRIDGES

Cartridges are manufactured from a durable polypropylene cord that is wound around a rigid polypropylene core. They are an economical solution to reduce fine sediment, including sand, silt, rust and scale particles.

Cartridges are available in a wide array of sizes and micron ratings to accommodate all of your filtration needs.

Technical data and operational parameters:

Parameter	Value
Height, inch	20
Outer diameter, inch	4,5
Micron Rating (Nominal)	20
Temperature of water, °C¹	+4+43
Maximum Capacity ²	21 100 gal (80 000 L)
Recommended filtration flow rate ³	5 Gpm (20 Lpm)

Materials of Construction:

Filter material Polypropylene fiber string

• Core Polypropylene

Warning!

Cartridges are not intended to be used where the water is microbiologically unsafe or with water of unknown quality without adequate disinfection before or after the filter.

The abovementioned information and technical data are relevant for products produced in 2016.

¹ Cartridge is intended for purification of cold water only

² Actual capacity depends on the source water quality and may vary

³ Do not exceed the recommended flow rate of filtration since it can lead to deterioration of treated water quality
