Belclene® 245

Antiscalant for Calcium Carbonate Control in High LSI Conditions

Description

Belclene® 245 is a halogen tolerant maleic polymer having excellent calcium carbonate and calcium sulfate inhibition performance in cooling water systems operating at high hardness and alkalinity.

Compared to existing maleic polymers, Belclene® 245 demonstrates superior performance for:

- Crystal growth blocking
- Calcium ion stabilization

Application

Belclene® 245 can be conveniently used to prepare stable all organic formulations with phosphonates and yellow metal corrosion inhibitors to provide:

- Excellent mild steel corrosion inhibition.
- Excellent antifoulant performance at heat transfer surfaces.

Benefits

All organic formulations using Belclene® 245 will sustain soluble calcium at salt saturation indices beyond that possible using conventional maleic polymer.

Using Belclene® 245 will enable the water treater to safely realize greater efficiency by operating to higher cycles of concentration.

Usage

*Please consult with your BWA Water Additives representative to determine optimal dosage recommendations for your system.

Packaging / Weight

Drum 530lb 240kg

*Consult your sales representative for availability.

Physical Properties

Appearance Clear to slightly turbid

amber liquid

Odor Slight Solids content 52% w/w

Specific gravity 1.216 @ 20 °C

pH of undiluted 1.4

product

Viscosity 48.0 m²sec

Freezing point Protect from frost

Solubility in:

- Water Miscible

Product specification upon request. Further details are available in the safety data sheet
