| Position | Qty. | Description |
|----------|------|--|
| | 1 | TP 25-50/2 A-O-A-BQQE |
| | | |
| | | Product No.: On request |
| | | Single-stage, close-coupled, volute pump with in-line suction and discharge ports of identical diameter. The pump is of the top-pull-out design, i.e. the power head (motor, pump head and impeller) can be removed for maintenance or service while the pump housing remains in the pipework. |
| | | The pump is fitted with an unbalanced rubber bellows seal. The shaft seal is according to EN 12756. Pipework connection is via PN 10 union connections (ISO 228-1). The pump is fitted with a fan-cooled asynchronous motor. |
| | | Further product details Pump |
| | | Pump housing and pump head are electrocoated to improve the corrosion resistance. Electrocoating includes: |
| | | Alkaline-based cleaning. Pretreatment with zinc phosphate coating. |
| | | 3) Cathodic electrocoating (epoxy). 4) Curing of paint film at 200-250 °C. |
| | | 4) Curing of paint him at 200-250°C. |
| | | |
| | | 1: Pump housing 2: Impeller |
| | | 3: Shaft 4: Coupling |
| | | 5: Pump head |
| | | The pump housing is provided with a replaceable stainles steel/PTFE neck ring to reduce the amount of liquid running from the discharge side of the impeller to the suction side. The impeller is secured with a split cone pressed onto the shaft. |
| | | The pump is fitted with an unbalanced rubber bellows seal with torque transmission across the spring and around the bellows. Due to the bellows, the seal does not wear the shaft, and the axial movement is not prevented by deposits on the shaft. |
| | | Primary seal: Rotating seal ring material: silicon carbide (SiC) Stationary seat material: silicon carbide (SiC) |
| | | This material pairing is used where higher corrosion resistance is required. The high hardness of this material pairing offers good resistance against abrasive particles. |
| | | Secondary seal material: EPDM (ethylene-propylene rubber) EPDM has excellent resistance to hot water. EPDM is not suitable for mineral oils. |
| | | A circulation of liquid through the duct of the air vent screw ensures lubrication and cooling of the shaft seal. |
| | | The motor stool forms connection between the pump housing and the motor, and is equipped with a manual air vent screw for venting of the pump housing and the shaft seal chamber. The sealing between motor stool and pump housing is an O-ring or a flat gasket. |
| | | |

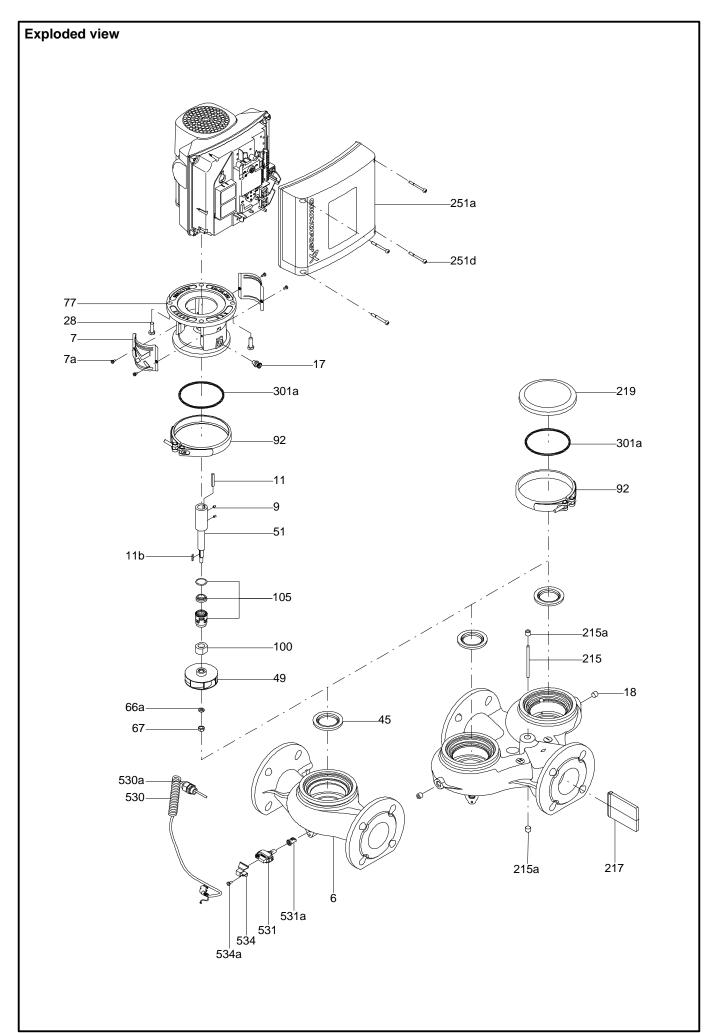

| Position | ition Qty. Description | | | | | |
|----------|---|---|-------------------------|--|--|--|
| | | The central part of the motor stool is provided with guards for protection against the shaft and coupling. | | | | |
| | | Motor and pump shaft are connected via a shell coupling. | | | | |
| | | Motor | | | | |
| | | The motor is a totally enclosed, fan-cooled motor with principal dimensions to IEC and DIN standards. | | | | |
| | | Electrical tolerances comply with IEC 60034. | | | | |
| | | The motor is flange-mounted with tapped-hole flange (FT). | | | | |
| | | Motor-mounting designation in accordance with IEC 60034-7: IM B 14, IM V 18 (Code I) / IM 3601, IM 3611 (Code II). The motor has built-in thermal protection (PTO current and temperature sensors) in accordance with IEC 60034-11 and requires no further motor protection. The protection reacts to both slow- and quick-rising temperatures, e.g. constant overload and stalled conditions. As the thermal protection incorporates automatic reset, the motor must be connected in a way which ensures that the automatic reset cannot cause accidents. Technical data | | | | |
