Position	Qty.	Description					
	1	TP 125-130/6 A-F-A-BAQE					
		Product No.: On request					
		Single-stage, close-coupled, volute pump with in-line suction and discharge ports of identical diameter. The pump is of the top-pull-out design, i.e. the power head (motor, pump head and impeller) can be removed for maintenance or service while the pump housing remains in the pipework.					
		The pump is fitted with an unbalanced rubber bellows seal. The shaft seal is according to EN 12756. Pipework connection is via PN 16 DIN flanges (EN 1092-2 and ISO 7005-2). The pump is fitted with a fan-cooled asynchronous motor.					
		Further product details					
		The product's minimum efficiency index (MEI) is greater or equal to 0.70. This is by the Commission Regulation (EU) considered as an indicative benchmark for best-performing water pump available on the market as from 1 January 2013.					
		 Pump Pump housing and pump head are electrocoated to improve the corrosion resistance. Electrocoating includes: Alkaline-based cleaning. Pretreatment with zinc phosphate coating. Cathodic electrocoating (epoxy). Curing of paint film at 200-250 °C. 					
		1: Pump housing 2: Impeller 3: Stub shaft 4: Pump head/motor stool					
		5: Wear rings The pump housing is provided with a replaceable brass neck ring to reduce the amount of liquid running from the outlet side of the impeller to the inlet side. The impeller is secured to the shaft with a nut.					
		The pump is fitted with an unbalanced rubber bellows seal with torque transmission across the spring and around the bellows. Due to the bellows, the seal does not wear the shaft, and the axial movement is not prevented by deposits on the shaft.					
		 Primary seal: Rotating seal ring material: carbon graphite, metal-impregnated Stationary seat material: silicon carbide (SiC) 					
		This material pairing has a very good corrosion resistance and is especially suitable for water up to 120 °C. However, seal life will be reduced at temperatures above 90 °C. The material pairing is not recommended for liquids containing particles as this will result in heavy wear on the SiC face. Secondary seal material: EPDM (ethylene-propylene rubber)					

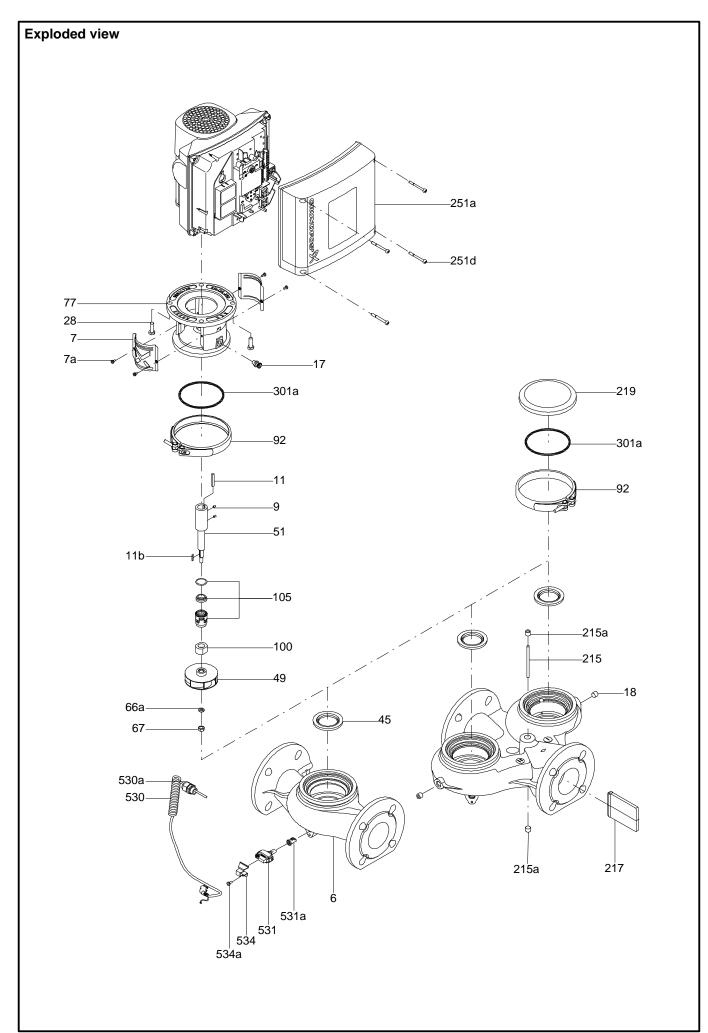

Position	Qty.	Description				
	EPDM has excellent resistance to hot water. EPDM is not suitable for mineral oils.					
		A circulation of liquid through the duct of the air vent screw ensures lubrication and cooling of the shaft seal.				
		The flanges have tappings for mounting of pressure gauges.				
	The motor stool forms connection between the pump housing and the motor, and is equipp manual air vent screw for venting of the pump housing and the shaft seal chamber. The se between motor stool and pump housing is an O-ring.					
		The central part of the motor stool is provided with guards for protection against the shaft and coupling. The pump shaft is fastened directly on the motor shaft with key and set screws.				
		Motor				
	fan-cooled motor with principal dimensions to IEC and DIN standards. I IEC 60034.					
		The motor is flange-mounted with free-hole flange (FF). Motor-mounting designation in accordance with IEC 60034-7: IM B 5, IM V 1 (Code I) / IM 3001, IM 3011 (Code II).				
		The motor efficiency is classified	as IE3 in accordance with IEC 60034-30-1.			
		 The motor has thermistors (PTC sensors) in the windings in accordance with DIN 44081/DIN 44082. The protection reacts to both slow- and quick-rising temperatures, e.g. constant overload and stalled conditions. Thermal switches must be connected to an external control circuit in a way which ensures that the automatic reset cannot cause accidents. The motors must be connected to a motor-protective circuit breaker according to local regulations. 				
		The motor can be connected to a variable speed drive for adjustment of pump performance to any duty point. Grundfos CUE offers a range of variable speed drives. Please find more information in Grundfos Product Center.
